Mega Fortris Bio-Additive Enhanced Seals

Redefining the future of security, one seal at a time.

Amidst growing global concerns about Building on a Foundation of Sustainability, compatible in recycling. This next step is a environmental sustainability, Mega Fortris is we're proud to unveil our latest initiative, significant improvement in jointly sustaining taking proactive steps to address its one that reinforces our steadfast the supply chain and the environment. ecological footprint.

Taking evolution one step further, Mega Fortris Group, who has always been committed to developing products that products, this evolutionary approach support a sustainable environment and to ensures that our products not only provide contribute to a better future, lead the way in protection but also actively contribute to offering eco-friendly products to our in our manufacturing processes.

commitment to environmental sustainability. By incorporating bio-additives into our entire range of security seal environmental sustainability.

customers, partnering with them to To provide eco-conscious solutions on a operations, ensuring that sustainability is a minimise plastic waste. Our commitment to wide array of applications, all Mega Fortris' guiding principle ingrained in our brand. sustainability is evident in our installation of security seal product lines with plastic solar panels for renewable energy, as well as content will include the BioSphere our practice of recycling raw materials, bio-additive from 13 May 2024, surplus items, runners, and recycled plastics comprehensively securing the global supply chain while reducing our footprint.

> By incorporating bio-additives, we're not just differentiating ourselves from the competition; we're setting a new standard for responsible business conduct. Our journey toward sustainability is evolutionary, driven by innovation and social responsibility.

So, what exactly are these bio-additives, and how do they work? Essentially, the bio-additives serve as catalysts for anaerobic microbes, enabling them to break down plastics into byproducts such as low-weight non-toxic compounds, and water. By leveraging chemical mechanisms to disrupt the strong bonds inherent in plastic polymers, these additives facilitate the Our vision extends beyond bio-additive non-toxic to the environment and future of security, one seal at a time.

Central to our sustainability ethos is the establishment of an ESG working group, equipped with a comprehensive policy and strategy that aligns seamlessly with our overall business objectives and the United Nations Sustainable Development Goals. This strategic framework is integral to our

We're also taking proactive steps to educate our customers on the proper handling and disposal of our products. Through our ESG Materiality Topics management, we're paving the way for responsible consumption, one informed decision at a

biodegradation process, paving the way for resins. As part of our future vision, we're a circular economy where waste is continuing our efforts to develop fully minimised, and resources are conserved. compostable, non-fossil fuel-based resin The byproducts of degradation are both security seals. Together, let's redefine the

MCAB Mega Secure Boxes

The Mega Secure Box is designed for a wide range of applications in the hospitality and entertainment, financial services, retail and police sectors. With easy manual locking, high visibility of tamper attempts, and the ability of quick visual inspection of the seal and box contents, the security box is a strong and effective addition to any security system. The boxes can be paired with a range of seals for further security.

The reusable boxes are designed to easily secure and move goods, especially in harsh conditions. They are lightweight, durable and rigid, hence suitable to contain heavy items. The boxes are recyclable, reusable and water-resistant, making them suitable for all industries and purposes. With a special lid-closing mechanism, the user can also add a security seal to secure the box and monitor for any possible tampering.

All bags can be customised and manufactured into various sizes, shapes, colors, windows, handles (with constructive requirement subject to review). Our reusable bags can be made from various fabric materials such as PVC, polyester, nylon and canvas.

The unique feature of this bag is the locking via reverse zipping terminal with a fully closed chamber system. Secured on the closed chamber with a unique sequential numbered security seal, it works to prevent tampering and is highly tamper-evident.
